INTRODUCTION

The Arkansas Department of Health, through its Division of Vital Records is charged with the registration of certificates of births, deaths, marriages and divorces. Compilation of data from these records is the primary source of the statistics contained in this report.

All current vital events received by the Division of Vital Records by March 31 of the following year are included in this annual presentation. Those records received after this date are nominal in number and their absence does not affect the statistical validity of data contained in this report.

We have incorporated the out-of-state occurrences to Arkansas residents in the birth and death data. The Annual Reports published prior to 1978 (1970-1977) did not include data on events occurring in other states to Arkansas residents. Due to the nature of the reporting procedure, marriages and divorces are shown by county of occurrence only. NOTICE: Divorce statistics published previously for the years 1970 through 1979 were in error. The divorce totals for those years were inflated by approximately thirty percent because the program used to compile these statistics in data processing was including dismissals and legal separations in the divorce and annulment totals. This report contains revised divorce data for those years that we have available at the present time.

Some of the parts do not add to the total because the specific breakout such as race, age, sex, or county was not stated on the document. The differences were minimal, and are not considered significant.

The population data used in the State and County summaries for 1980 are final counts published by the United States Bureau of the Census for 1980. Specific age group counts were not available at the time this report was prepared.

Some additional data is available that is not published on an annual basis because of the specific nature of the statistics. The Division of Health Statistics will be glad to evaluate and consider these requests for specific data if the need should arise. Please address all requests to:

DEFINITIONS

ANNULMENT - Means the legal invalidation or voiding of a marriage which confers on the parties the status of never having been married to each other.

DEATH - Means the permanent disappearance of any evidence of life at any time after live birth.

DIVORCE - Means the final legal dissolution of a marriage.

FETAL DEATH (STILLBIRTHS) - Means death prior to the complete expulsion on extraction from its mother of a product of human conception, with weeks gestation of 28 weeks or more and/or weighing 1,000 grams or more; the death is indicated by the fact that after such expulsion or extraction the fetus does not breathe or show any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles.

INDUCED ABORTION (Induced termination of pregnancy) - Means the intentional termination of pregnancy with the intention other than to produce a liveborn infant or to remove a dead fetus.

INFANT DEATH - Means the death of a individual under one year of age.

LIVE BIRTH - Means the complete expulsion or extraction from its mother of a product of human conception, irrespective of the duration of pregnancy, which, after such expulsion or extraction, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached.

MARRIAGE - Means the legal union of persons of opposite sex.

MATERNAL DEATH - Death attributable to delivery or the complications of pregnancy, childbirth, or the puerperium.

PREMATURE BIRTH (Low-weight birth) - Means any liveborn infant whose birth weight is under 2500 grams (5½ pounds).

SPONTANEOUS ABORTION (MISCARRIAGE) - Means the termination of a previable conception through natural causes and without the aid of mechanical or medicinal agents with the duration of pregnancy being less than 28 weeks gestation and/or weighing less than 1,000 grams.

WEEKS GESTATION - The period of gestation (length of pregnancy) is the number of completed weeks elapsed between the first day of the last menstrual period and the date of delivery or termination, irrespective of whether the product of conception was liveborn or born without evidence of live.

NEONATAL DEATH - Death occurring to an individual less than 28 days of age.

AGE - Age in years as of last birthday. For infants, age may be stated in days, weeks or months.

RACE - The race is recorded as the individual states on certificate for mother, father, decedent, couple being married or divorced. Race of live birth is determined by race of parents.

OCCURRENCE - The place (city, county or state) where the event occurred.

RESIDENCE - Usual place of residence. For births and fetal deaths, usual place of residence of mother is used. May be different than mailing address.

UNDERLYING CAUSE OF DEATH - Disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which produced the fatal injury. The cause of death codes used in this report are from ICD 9 as approved by the World Health Organization.

1980 ARKANSAS VITAL STATISTICS

GENERAL SUMMARIES

1980 ARKANSAS VITAL STATISTICS SUMMARY

BIRTHS

Arkansas' birth rate this year of 16.3 per thousand population was about the same as last year (16.4), while the United States rate of 16.2 showed an increase over the previous year (15.9).

Of the 37,145 births to Arkansans in 1980, over one fifth (8,036) were to mothers 19 and under; 191 of these were 14 and under. Maternal ages ranged from 11 to 49.

A total of 7,643 births were illegitimate, about one out of every five Arkansans born this year. Over half (5,271 out of 9,486) of the nonwhite births were to unwed mothers, as were almost nine percent (2,372 out of 27,659) of the white births. Forty-four percent (3,560) of the births to women 19 and under were illegitimate.

There were 2,537 premature births, with nearly twice the rate for nonwhite (103.3 per thousand live births) as for white (56.3) premature births. Birth defects were reported on the birth certificates of 286 newborns, with anomalies of the limbs (72) being the most common birth defect reported.

FETAL DEATHS AND ABORTIONS

There were 8,452 total abortions and fetal deaths reported. Of this number, 2,375 were spontaneous abortions (miscarriages) and 398 were stillbirths (over 28 weeks gestation). Complications of the placenta or umbilical cord were the most common cause, resulting in 116 stillbirths. The rate of stillbirths was higher for nonwhite (15.1 per thousand live births + stillbirths) than for white (9.1).

There were 5,679 induced abortions performed this year; 1,995 of which were to women under 19 years of age, including 60 to women under 15. Three fourths of the women who received induced abortions were unmarried. The most common reason given for induced abortion was maternal mental health.

INFANT DEATHS

Both Arkansas and the United States had their lowest infant mortality rates ever recorded; 12.6 per thousand births for Arkansas (13.2 last year) and 12.5 for the United States (13.0 last year). The infant mortality rate of 18.4 for nonwhites was almost twice the 9.9 rate for whites.

Of the 467 Arkansas infants who died before their first birthday, over half (285) died before they were 28 days old. The leading cause of death for infants in their first year of life were conditions which originated in the perinatal period (first 28 days of life), which resulted in 190 infant deaths. Birth defects caused 92 infant deaths, while Sudden Infant Death Syndrome ("Crib Death") claimed 77.

DEATH

Both the Arkansas and the United States death rates were up slightly; 9.9 deaths per thousand population (9.7 last year) for Arkansas, and 8.9 (8.7 last year) for the United States. Nonwhite death rate in Arkansas was 10.5, compared to a white death rate of 9.8.

Of the 22,676 Arkansans who died this year, heart diseases, the #1 killer, took 8,396 lives. The #2 cause of death was cancer, which led to the deaths of 4,463 Arkansans. Cerebrovascular diseases, #3, killed 2,408; and the #4 cause of death, accidents, took 1,277 lives. Almost half of all the accidental deaths were from motor vehicle accidents; and for ages 1 - 34, accidents were the leading cause of death.

MARRIAGE AND DIVORCE

There were 26,513 Arkansans married and 15,882 divorced in 1980. The Arkansas marriage rate was 11.6 per thousand population (11.7 last year), higher than the United States rate of 10. 9 (10.7 last year). Although the Arkansas divorce rate was not as high as previously believed (due to computer programming data error, see page 1), at 6.9 (7.0 last year) it is still higher than the United States rate of 5.3 (5.3 last year.)
